Trans. of Erdöl und Kohle (West Germany) 1957, v. 10, no. 7, p. 428-429.

Refractive indexes and densities change when olefins and aromatics are hydrogenated or when saturated hydrocarbons are isomerized, the change in refractive index divided by the change in density being 0.35 [illegible] for hydrogenation and -0.45 for isomerization. As shown for a West Texas crude, an anthracene oil, and a pitch, saturation and isomerization occurring during hydrogenation of aromatics can be determined from a refractive index vs. density curve plotted during the process.
